

WEB TECHNOLOGIES (CSC 3222)

Quiz Preparation — 100 Multiple Choice Questions

Lecture 01: Introduction to Web Technology | Lecture 02: Introduction to CSS

◆ Correct answers are shown in green after each question ◆

■ SECTION A — Lecture 01: Introduction to Web Technology (Q1–Q55)

1. What is Client/Server Architecture also known as?

- A) Distributed Computing Model
- B) Networking Computing Model
- C) Cloud Computing Model
- D) Parallel Computing Model

✓ Answer: B

2. In a Three-tier Client-Server Architecture, which tier contains the business logic?

- A) Client tier
- B) Resource manager tier
- C) Application server tier
- D) Database tier

✓ Answer: C

3. Which of the following best describes Peer-to-Peer (P2P) architecture?

- A) A centralized server controls all clients
- B) Clients send requests to a main server
- C) Peers are equally privileged participants sharing tasks
- D) One peer acts as master and others as slaves

✓ Answer: C

4. In the Three-tier architecture, what is the role of the Resource Manager?

- A) Interact with the user
- B) Store data
- C) Handle business logic
- D) Manage HTTP requests

✓ Answer: B

5. What does WWW stand for?

- A) World Wide Web
- B) Wide World Web
- C) World Web Wired
- D) Web Wide World

✓ Answer: A

6. What is the key difference between the Internet and the WWW?

- A) They are the same thing
- B) Internet is a global network; WWW is an application running on the Internet
- C) WWW is a global network; Internet is an application
- D) The Internet only supports email while WWW supports web pages

✓ Answer: B

7. Which protocol suite does the Internet use?

- A) FTP/SMTP
- B) TCP/IP
- C) HTTP/HTTPS
- D) DNS/DHCP

✓ Answer: B

8. What system is used to resolve a server name into an IP address?

- A) HTTP
- B) URL
- C) DNS (Domain Name System)
- D) URI

✓ Answer: C

9. What does URI stand for?

- A) Universal Resource Index
- B) Uniform Resource Identifier
- C) Universal Reference Indicator
- D) Unified Resource Interface

✓ Answer: B

10. Which of the following is the correct syntax of a URI?

- A) <scheme>://<path>?<query>#<fragment>
- B) <scheme name> : <hierarchical part> [? <query>] [# <fragment>]
- C) <protocol>:<host>/<path>
- D) <host>:<port>/<resource>

✓ Answer: B

11. In the URI 'http://en.wikipedia.org/wiki/URI?page=2#Examples', what is 'en.wikipedia.org'?

- A) Path
- B) Scheme
- C) Authority
- D) Fragment

✓ Answer: C

12. In a URI, query parameters are commonly separated by which character?

- A) Colon (:)
- B) Hash (#)
- C) Ampersand (&) or Semicolon (;)
- D) Forward slash (/)

✓ Answer: C

13. In a URI, the fragment part is separated from the rest by which character?

- A) ?
- B) &
- C) /
- D) #

✓ Answer: D

14. What does the path part of a URI conceptually resemble?

- A) IP addresses
- B) Directories

- C) Query strings
- D) Port numbers

✓ Answer: B

15. What does HTTP stand for?

- A) HyperText Transfer Protocol
- B) High Text Transport Protocol
- C) Hyperlink Transfer Protocol
- D) HyperText Transmission Protocol

✓ Answer: A

16. HTTP is described as 'connectionless'. What does this mean?

- A) The server and client maintain a permanent connection
- B) After a request and response, the client and server forget about each other
- C) HTTP does not require a network connection
- D) HTTP uses UDP instead of TCP

✓ Answer: B

17. What HTTP status code indicates a successful response?

- A) 404
- B) 403
- C) 500
- D) 200

✓ Answer: D

18. Which HTTP status code means 'Not Found'?

- A) 200
- B) 403
- C) 404
- D) 500

✓ Answer: C

19. Which HTTP request method is used to post data to a web server (e.g., HTML forms)?

- A) GET
- B) PUT
- C) DELETE
- D) POST

✓ Answer: D

20. Which HTTP method asks the server to store data?

- A) GET
- B) PUT
- C) POST
- D) DELETE

✓ Answer: B

21. Which HTTP method is used to retrieve a web resource from the server?

- A) POST
- B) DELETE
- C) GET
- D) PUT

✓ Answer: C

22. What is the URL syntax format?

- A) scheme://hostname/path
- B) protocol://hostname:port/path-and-file-name
- C) http://server:resource
- D) ip:port/filename

✓ Answer: B

23. HTTP is described as 'stateless'. What does this mean?

- A) The server remembers client sessions permanently
- B) HTTP uses cookies to maintain state
- C) The server and client are aware of each other only during a current request
- D) HTTP connections are always kept alive

✓ Answer: C

24. What HTTP status code indicates 'Internal Server Error'?

- A) 200
- B) 301
- C) 403
- D) 500

✓ Answer: D

25. What does HTML stand for?

- A) Hyper Text Markup Language
- B) High Text Markup Language
- C) HyperLink Markup Language
- D) Hypertext Management Language

✓ Answer: A

26. What is the purpose of HTML tags?

- A) They are displayed in the browser as-is
- B) They label content and tell the browser how to display it
- C) They store data in the database
- D) They replace CSS styling

✓ Answer: B

27. What is the correct HTML tag syntax?

- A) {tagname}content{/tagname}
- B) [tagname]content[/tagname]
- C) <tagname>content goes here...</tagname>
- D) #tagname content #/tagname

✓ Answer: C

28. HTML documents are also called:

- A) Scripts
- B) Web pages
- C) Stylesheets
- D) Programs

✓ Answer: B

29. What does XML stand for?

- A) Extra Markup Language
- B) Extensible Markup Language

- C) Extended Management Language
- D) Extendable Module Language

✓ Answer: B

30. What was XML primarily designed for?

- A) Displaying web pages
- B) Styling HTML documents
- C) Storing and transporting data
- D) Running server-side scripts

✓ Answer: C

31. Which of the following is TRUE about XML tags?

- A) XML tags are predefined like HTML
- B) XML tags must be lowercase
- C) XML tags are not predefined; you must define your own
- D) XML tags are optional

✓ Answer: C

32. Which organization recommends XML?

- A) IEEE
- B) ISO
- C) W3C
- D) IETF

✓ Answer: C

33. Which of the following is NOT a valid XML naming rule?

- A) Names can contain letters, numbers, and other characters
- B) Names cannot start with a number
- C) Names can start with the letters 'xml'
- D) Names cannot contain spaces

✓ Answer: C

34. What must every XML document contain?

- A) A stylesheet
- B) A root element
- C) A DOCTYPE declaration
- D) At least 10 child elements

✓ Answer: B

35. In XML, attribute values must be:

- A) Numeric
- B) Quoted
- C) Lowercase
- D) Separated by commas

✓ Answer: B

36. Which statement about XML is TRUE?

- A) XML actively does something to the data
- B) XML is only for web pages
- C) XML is the most common tool for data transmissions between applications
- D) XML replaces HTML

✓ Answer: C

37. What does XHTML stand for?

- A) eXtended HyperText Markup Language
- B) eXtensible HyperText Markup Language
- C) Extra HyperText Markup Language
- D) Enhanced HyperText Markup Language

✓ Answer: B

38. How does XHTML differ from HTML?

- A) XHTML is less strict than HTML
- B) XHTML does not support CSS
- C) XHTML is stricter and requires well-formed documents
- D) XHTML uses different tags than HTML

✓ Answer: C

39. Which of the following is a rule in XHTML?

- A) Tag names can be in uppercase or lowercase
- B) Tags do not need closing tags
- C) Tag names must be in lowercase
- D) Multiple root elements are allowed

✓ Answer: C

40. XHTML is a combination of which two languages?

- A) HTML and CSS
- B) HTML and JavaScript
- C) HTML and XML
- D) XML and CSS

✓ Answer: C

41. Why was XHTML recommended by W3C?

- A) To replace CSS entirely
- B) To combine HTML's content capabilities with XML's strict syntax for better device compatibility
- C) To allow HTML without any syntax rules
- D) To create faster websites

✓ Answer: B

42. What does DOM stand for?

- A) Document Object Module
- B) Data Object Model
- C) Document Object Model
- D) Dynamic Object Management

✓ Answer: C

43. What is the DOM?

- A) A programming language for web development
- B) A platform and language-neutral interface for accessing and updating document content
- C) A server-side framework
- D) A CSS styling method

✓ Answer: B

44. How many parts/levels is the DOM separated into?

- A) 2
- B) 3

- C) 4
- D) 5

✓ Answer: B

45. What is the topmost node in a DOM tree?

- A) The root element
- B) The HTML element
- C) The Document object
- D) The Body element

✓ Answer: C

46. Which DOM type is the standard model for XML documents?

- A) Core DOM
- B) HTML DOM
- C) XML DOM
- D) Script DOM

✓ Answer: C

47. What does DHTML stand for?

- A) Dynamic HyperText Markup Language
- B) Default HTML
- C) Distributed HyperText Markup Language
- D) Dual HyperText Markup Language

✓ Answer: A

48. DHTML is based on the combination of which technologies?

- A) HTML, XML, and CSS
- B) HTML, JavaScript, CSS, and DOM
- C) HTML, PHP, and MySQL
- D) HTML, Python, and JSON

✓ Answer: B

49. Which JavaScript method is used in DHTML to access an element by its ID?

- A) document.getElement()
- B) document.querySelector()
- C) document.getElementById()
- D) document.findElement()

✓ Answer: C

50. What property is used in DHTML to change the inner content of an HTML element?

- A) innerText
- B) innerHTML
- C) textContent
- D) nodeValue

✓ Answer: B

51. Which organization produces most of the documents that are WWW standards?

- A) IETF
- B) IEEE
- C) W3C (World Wide Web Consortium)
- D) ISO

✓ Answer: C

52. ECMAScript (usually in the form of JavaScript) is produced by which organization?

- A) W3C
- B) ISO
- C) Ecma International
- D) IETF

✓ Answer: C

53. What is a web browser?

- A) A server-side application for storing data
- B) A software application for retrieving, presenting, and traversing information on the WWW
- C) A tool for writing HTML code
- D) A database management system

✓ Answer: B

54. Which of the following is an example of a web browser?

- A) Apache
- B) XAMPP
- C) Google Chrome
- D) PHP

✓ Answer: C

55. Which rendering language(s) do browsers use to display web pages?

- A) Only HTML
- B) Only CSS
- C) HTML and CSS (and other page composition languages)
- D) Only JavaScript

✓ Answer: C

■ SECTION B — Lecture 02: Introduction to CSS (Q56–Q100)

56. What does CSS stand for?

- A) Creative Style Sheets
- B) Cascading Style Sheets
- C) Computer Style Sheets
- D) Colorful Style Sheets

✓ Answer: B

57. What is the primary purpose of CSS?

- A) To store data
- B) To describe how HTML elements are displayed on screen
- C) To handle server-side logic
- D) To define the structure of a web page

✓ Answer: B

58. External stylesheets are stored in files with which extension?

- A) .html
- B) .js
- C) .css
- D) .xml

✓ Answer: C

59. What was HTML originally designed to do?

- A) Describe the formatting and design of a web page
- B) Describe the content of a web page
- C) Run server-side scripts
- D) Store data in databases

✓ Answer: B

60. In CSS syntax, what does the 'selector' point to?

- A) A CSS file
- B) The HTML element you want to style
- C) A JavaScript function
- D) A database record

✓ Answer: B

61. In CSS, declarations are separated by:

- A) Commas
- B) Colons
- C) Semicolons
- D) Ampersands

✓ Answer: C

62. Declaration blocks in CSS are surrounded by:

- A) Parentheses ()
- B) Square brackets []
- C) Angle brackets < >
- D) Curly braces { }

✓ Answer: D

63. Into how many categories are CSS selectors divided?

- A) 3
- B) 4
- C) 5
- D) 6

✓ Answer: C

64. Which CSS selector selects HTML elements based on the element name?

- A) ID selector
- B) Class selector
- C) Element selector
- D) Universal selector

✓ Answer: C

65. How is a CSS ID selector denoted?

- A) With a dot (.)
- B) With a hash (#)
- C) With an asterisk (*)
- D) With a colon (:

✓ Answer: B

66. Can an ID value be used for multiple elements on the same page?

- A) Yes, IDs can be reused
- B) No, the id of an element is unique within a page

- C) Only if they are in different sections
- D) Only in external CSS files

✓ Answer: B

67. How is a CSS class selector denoted?

- A) With a hash (#)
- B) With a dot (.)
- C) With an asterisk (*)
- D) With a colon (:

✓ Answer: B

68. What does the CSS Universal Selector (*) select?

- A) Only body elements
- B) Only div elements
- C) All HTML elements on the page
- D) Only elements with a class attribute

✓ Answer: C

69. How do you group multiple selectors in CSS?

- A) Separate them with a semicolon
- B) Separate them with a comma
- C) Separate them with a colon
- D) Separate them with a plus sign

✓ Answer: B

70. What are the three ways of inserting CSS into an HTML document?

- A) Embedded, Linked, and Script
- B) External CSS, Internal CSS, and Inline CSS
- C) Header CSS, Body CSS, and Footer CSS
- D) Inline, Outline, and Mainline CSS

✓ Answer: B

71. Where is an External CSS file linked in an HTML document?

- A) Inside the <body> tag
- B) Inside the <footer> tag
- C) Inside the <link> element in the <head> section
- D) At the bottom of the HTML file

✓ Answer: C

72. Which HTML tag is used to link an external CSS stylesheet?

- A) <style>
- B) <css>
- C) <link>
- D) <script>

✓ Answer: C

73. Where is Internal CSS defined?

- A) In a separate .css file
- B) Inside the <style> element in the <head> section
- C) Directly inside each HTML tag
- D) In the <body> tag

✓ Answer: B

74. Inline CSS is applied using which HTML attribute?

- A) class
- B) id
- C) style
- D) css

✓ Answer: C

75. Which CSS insertion method should be used when one single HTML page has a unique style?

- A) External CSS
- B) Inline CSS
- C) Internal CSS
- D) Universal CSS

✓ Answer: C

76. What are the four components of the CSS Box Model?

- A) Color, Font, Size, Position
- B) Content, Padding, Border, Margin
- C) Header, Body, Footer, Sidebar
- D) Width, Height, Depth, Shadow

✓ Answer: B

77. In the CSS Box Model, which area clears space around the content but is transparent?

- A) Border
- B) Margin
- C) Padding
- D) Content

✓ Answer: C

78. In the CSS Box Model, what is the outermost layer?

- A) Padding
- B) Border
- C) Content
- D) Margin

✓ Answer: D

79. If an element has width=320px, padding=10px (each side), and border=5px (each side), what is the total width?

- A) 320px
- B) 340px
- C) 350px
- D) 360px

✓ Answer: C

80. What HTML tag defines a division or section used as a container for other elements?

- A) <section>
- B)
- C) <div>
- D) <container>

✓ Answer: C

81. How many different position values does CSS support?

- A) 3
- B) 4
- C) 5
- D) 6

✓ Answer: C

82. What is the default position value of HTML elements in CSS?

- A) relative
- B) fixed
- C) absolute
- D) static

✓ Answer: D

83. An element with position: static is:

- A) Positioned relative to its parent
- B) Fixed in the viewport
- C) Always positioned according to the normal flow of the page
- D) Positioned based on scroll position

✓ Answer: C

84. An element with position: relative is positioned relative to:

- A) The viewport
- B) The document body
- C) Its normal position
- D) Its nearest positioned ancestor

✓ Answer: C

85. An element with position: fixed is positioned relative to:

- A) Its parent element
- B) The viewport
- C) The document body
- D) Its nearest sibling

✓ Answer: B

86. Which position value means an element stays visible even when the page is scrolled?

- A) static
- B) relative
- C) absolute
- D) fixed

✓ Answer: D

87. An element with position: absolute is positioned relative to:

- A) The viewport always
- B) Its own original position
- C) The nearest positioned ancestor (or document body if none)
- D) The next sibling element

✓ Answer: C

88. What does position: sticky do?

- A) Keeps an element always at the top of the page
- B) Toggles between relative and fixed based on the user's scroll position
- C) Makes an element invisible

D) Positions an element relative to its parent

✓ Answer: B

89. Which CSS properties are used to position elements after setting the position property?

A) x, y, z, w

B) top, bottom, left, right

C) margin, padding, border, outline

D) width, height, min, max

✓ Answer: B

90. A 'positioned' element in CSS is one whose position is anything except:

A) relative

B) absolute

C) static

D) fixed

✓ Answer: C

91. A typical website layout is often divided into:

A) Header, menu, content, and footer

B) Title, body, script, and style

C) Introduction, main, sidebar, and conclusion

D) Home, About, Contact, and Blog

✓ Answer: A

92. Where is a website header usually located?

A) At the bottom

B) In the middle

C) At the top

D) On the left sidebar

✓ Answer: C

93. What does a navigation bar typically contain?

A) Images and videos

B) A list of links

C) Database records

D) Form inputs

✓ Answer: B

94. In a CSS multi-column layout using float, what should the total width of all columns add up to?

A) 50%

B) 75%

C) 100%

D) 200%

✓ Answer: C

95. Where is the footer placed in a website layout?

A) At the top

B) On the right side

C) At the bottom

D) In the navigation area

✓ Answer: C

96. Which CSS selector type selects elements based on a certain state?

- A) Attribute selector
- B) Combinator selector
- C) Pseudo-class selector
- D) Universal selector

✓ Answer: C

97. Which CSS selector type selects elements based on a specific relationship between them?

- A) Pseudo-element selector
- B) Combinator selector
- C) Class selector
- D) ID selector

✓ Answer: B

98. What is one major advantage of using an External CSS stylesheet?

- A) It can only be used on a single page
- B) It controls the layout of multiple web pages all at once
- C) It makes pages load faster by adding extra files
- D) It replaces JavaScript functionality

✓ Answer: B

99. In the HTTP communication process, who initiates the request?

- A) The web server
- B) The DNS server
- C) The HTTP client (browser)
- D) The firewall

✓ Answer: C

100. Which of the following correctly describes the relationship between HTML and CSS?

- A) HTML defines styles; CSS defines structure
- B) HTML defines the structure/content; CSS defines how the content is displayed
- C) HTML and CSS are the same technology
- D) CSS is used only for server-side processing

✓ Answer: B
